Climate Change

Resiliency Commission

Executive Order No. 2019-19

RELATIVE TO CREATING THE CLIMATE CHANGE RESILIENCY COMMISSION

Governor Lou Leon Guerrero has signed Executive Order 2019-19, creating the Climate Change Resiliency Commission. The Commission's objective is to develop an integrated strategy to build resiliency against the adverse effects of climate change and to reduce contributing factors such as greenhouse emissions.

The Governor has appointed Evangilene Lujan of the Guam Waterworks Authority and Dr. Romina King of the University as Chair and Vice-Chair of Commission.

Evangilene Lujan
Climate Change Resilency
Commission - Chair

Dr. Romina KingClimate Change Resilency
Commission - Vice Chair

Filling out the roster of Commission will be Senator Sabina Perez, Chair of the Legislatures Environment Committee as representatives from the Guam Environmental Protection Agency, the Bureau of Statistics & Plans as well as two public members. The executive order also provides for the formation of eight working groups to develop strategies to address important climate change concerns ranging from energy to food security.

We are seeing the harmful effects of climate change right here on our island, from erosion to brush fires, degradation of coral reefs, pollution, scarce agricultural resources, and increasing intensity of natural disasters. This initiative will coordinate our response to climate change to institute meaningful policies that will protect our natural resources and environment.

The time to act is now!

-Governor Lou Leon Guerrero

The Climate Change Resiliency Commission is tasked with developing and coordinating an effective, data-based response to climate change, focusing on eight key climate change outcomes:

Including renewable energy, conservation, and aviation, surface transportation and maritime fuel sources

Energy

Ocean and Land Resources

Including coral reefs, fisheries. forestry, mangroves, plant and wildlife ecosystems, tourism and recreational water use, and erosion control

Development Planning

Including land use planning, economic development planning, transportation systems, recycling, and solid waste

Public Health and Safety

Including hazards to human health and safety resulting from rising temperatures, changing disease vectors,

and increased risks of

brushfires

Including aquifer protection, surface water sources, water quality, conservation, and drought preparedness

Water Resources

Infrastructure and Community Resiliency

Including tropical storm preparedness, rising sea levels, coastal infrastructure and development, storm water management, hardening of important public and private sector facilities and infrastructure, coastal erosion and construction standards

Including food distribution systems, agriculture, fishing and aquaculture

Food Security

Greenhouse expanded use emissions and carbon Footprint

Including pollution control, green economy alternatives, revegetation for carbon uptake, and expanded use of green infrastructure

GREEN INFRASTRUCTURE

Last month the Bureau of Statistics and Plans-Guam Coastal Management Program (GCMP) hosted two workshops in conjunction with the National Oceanographic and Atmospheric Administration (NOAA).

Esther Taitague (BSP) sharing group efforts on Adaptation **Planning for Coastal** Communities.

The workshops tackled the issues of Adaptation **Planning for Coastal** Communities and Green Infrastructure for Coastal Resilience.

These free interactive courses provided participants with ground and practical skills for incorpoadaptation strategies into processes and green infrastructure concepts that plays a critical role in making coastal communities

more resilient to threats such as climate change. Over 40 participants attended the two workshops involving professionals from local government agencies. federal agencies, and the private sector.

Local Flood Problem

At the invitation of US Army Corps of

Engineers, Chief of Civil and Public Works Branch, Mr. Edwin Reyes, Administrator, Guam Coastal Management Program, Bureau of Statistic and Plans, Office of the Governor of Guam, gave a presentation to the US Army Corps of Engineers Honolulu District leadership on how GCMP's work to characterize a local flood problem in Merizo, along with assistance from the Coastal States Organization's national network, served as the basis and need for greater coordination in finding long term solutions for the community. His presentation provide an overview of BSP's planning authority and function within the Government of Guam and how it is postured to maximize cross-agency collaboration. Edwin's talk highlighted the critical and important work the USACE Honolulu District is providing to the territory and how Guam is using the technical work to inform the planning process, and develop CIP financing strategies to address flood and erosion problems in Hagåtña, Merizo, Umatac, Santa Rita, and Agat. The presentation was held on Monday September 9, 2019 at Fort Shafter Honolulu.

BSP IN

Last June, as part of World Oceans Day, organized by Underwater World, community volunteers picked up trash in Tumon Bay. The Bureau of Statistics and Plans provided trash bags and gloves and BSP staff participated in the event as well.

World Oceans Day- celebrating our oceans, our connections and making a real difference.
